

Paid Internship Opportunity

Site: Mosquito Abatement District-Davis (MADD)

Description: This internship will allow the intern to experience the real world and practical application of public health in a vector control setting. The intern will be directly involved with vector studies such as surveillance and exploring new vector control methods. The intern will also have the opportunity to participate in mosquito control field operations.

Applicants should:

Have an understanding of study design and data analysis

Be proficient in standard Microsoft office software

Be willing to present results at the annual Utah Mosquito Control Association (UMAA) meeting

Be willing to work outdoors as well as in the lab

Prior knowledge of mosquito vector biology or control methods is not required.

The internship pays \$9/hour 40 hours a week through the summer. There is some flexibility in working hours.
